

Why Choose FLO For Your Business

Hassle-free service for you and your employees

As an employer, you want to ensure your employees benefit from a **premium, user-friendly service**. Our workplace charging stations are integrated with our Canada-wide network and monitored in real time from our national operations centre to guarantee reliability.

Employees will conveniently access workplace stations with the same membership card or mobile app they use on FLO's public network, and rely on a **24/7 bilingual support line** in case they need help.

Technology that works for you

Keeping your employees happy is your priority, but you also want to keep expenses under control. Our smart energy management technology lets you **limit peak demand surcharges** while still making sure every connected vehicle is fully charged at the end of the work day.

Managing FLO charging stations is simple—no matter how many chargers are installed in your parking lot. From a dedicated online portal, easily grant access rights to EV-driving employees, configure energy management settings and download **detailed data reports** to keep track of charging station usage and electricity consumption.

Meeting both current and future demand

Electric vehicles are playing an increasing role in private transportation, and it's important for workplaces to prepare for this revolution in personal mobility.

We make it easy for you to add more charging stations as demand grows, while keeping installation costs and operational expenses to a minimum. Our technology can power up to **4 times more vehicles** than standard installations would allow, without requiring expensive electrical upgrades.
